

oscFile is the most affordable, fully-featured document capture solution available!

Why are many document imaging systems so complicated and costly? **Why** do they create proprietary files?

Many small business scanning applications lack time-saving automation features like OCR and barcode recognition found in enterprise software.

oscFile is the most affordable fully-featured document capture solution available. oscFile provides easy 1-step scanning, unattended processing and even supports Microsoft Office, PDF, audio and video files. It is the fastest, most affordable way to organize all of your digital files or index them for your document management system.

oscFile most powerful feature is its simplicity! Complex scanning work-flows can be distributed remotely via email and be performed with just a single mouse-click. Installation is quick, and training is minimal. You can even use your digital copier to scan files and let process them automatically. Ready to learn more? A Free 30-day trial and sample videos are available at our website.

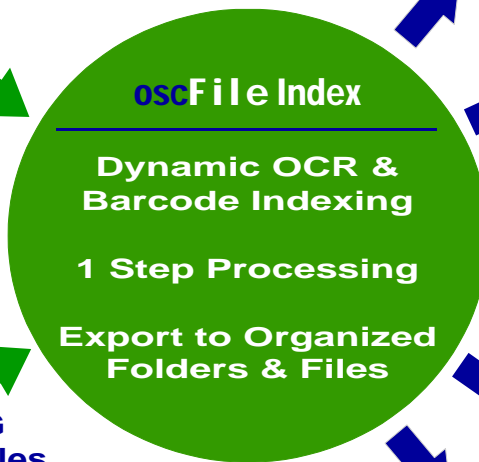

Digital Copiers & Multi-Function Printers

Document Scanners

Office, PDF, JPG & Other Type Files

Search Viewer

Custom Database

TWAIN & ISIS Scanning from ANY Scanner!

The oscFile Document Management Suite

oscFile Index	Automates document scanning and indexing
oscFile QC	View thumbnails, rotate, clean-up and rescan images
oscFile Send	Distribute documents via secure FTP or e-mail
oscFile Search	Search and view your documents from any database
oscFile QB	Attach files and post captured data to your QuickBooks database
oscFile Coversheet	Print barcode cover pages to automate indexing from scanners or MFPs

Applications

oscFile's open architecture and generic feature set mean it can perform virtually any scanning and indexing task that needs done. These sample applications highlight a few of the ways these features can be used to create uniquely useful and automated solutions.

- Automatically Process Images from Digital Copiers
- Integration with Custom Business Software
- Distributed Capture
- Standalone Document Management System
- Mail Room Scanning / Scan to eMail
- Process My Documents to Network Server

System Features

Streamlined Document Capture
TWAIN & ISIS Scanning
Use Any Scanner
Dynamic OCR, Zone & Full Page
Barcode Recognition
Optical Mark Recognition
Automatic Indexing
Auto-populate index field data from your database
Index any file on your computer
Electronic Imprinting & Bates Stamping
Document Presence Auditing
Document Retrieval Options
Remote Location Scanning
Automated Processing
Scan to an input folder for later processing, or scan directly into the indexing process
Preview audio, video & OLE-enabled documents
Command-line interface for easy application integration
Export to any ODBC or OLE database
Locate moving OCR zones with pattern matching
Pattern matching works on MS Office & PDF files also
No Monthly Page Count Limits or Click Charges
